

Stage 6.3 held-out fits: plain vs path-label vs path-memory vs local-identifiability

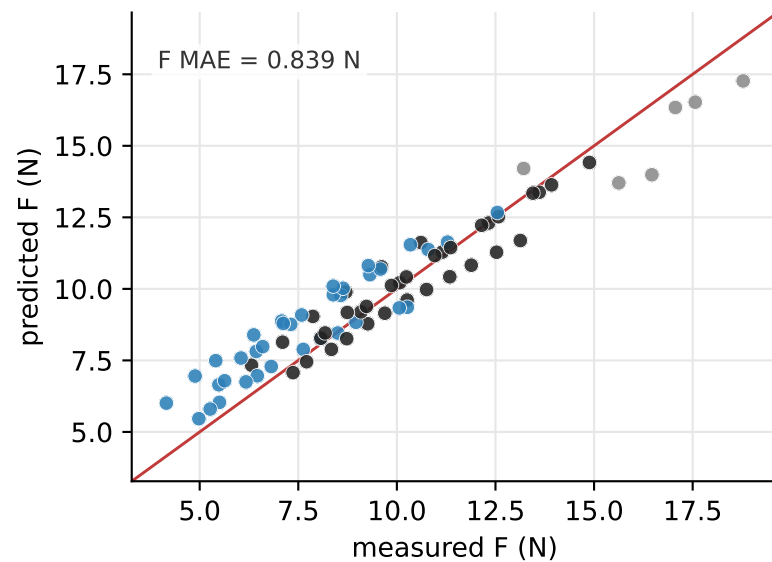

Expanded dataset: train = 561 states, held-out = 78 states; predictions from the same held-out dense-loop sessions

● direct loading ● return unloading ● preload state — ideal 1:1

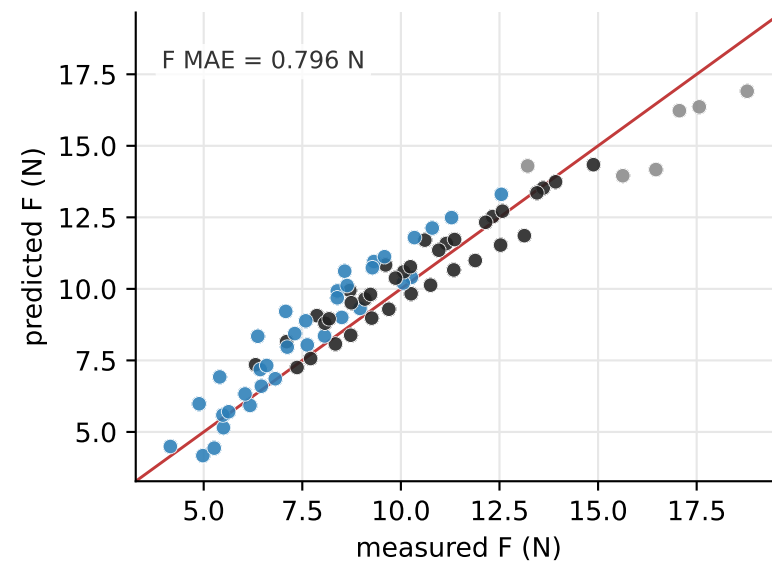

**a Plain magnetic baseline
B only**

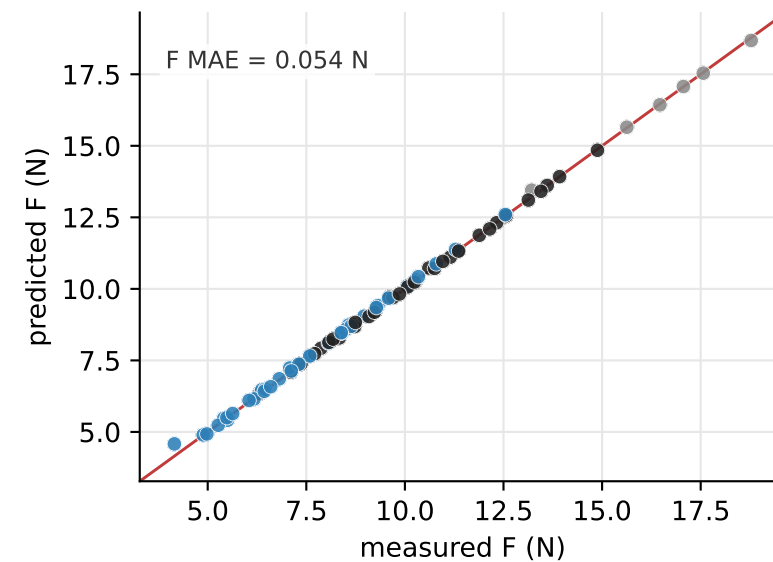

**b Path-label baseline
B + branch label**

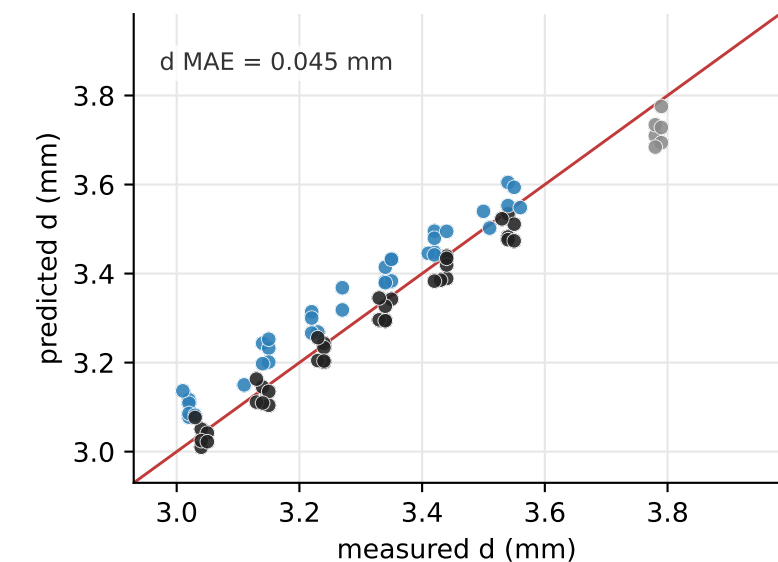

**c Path-memory model
B + path history**

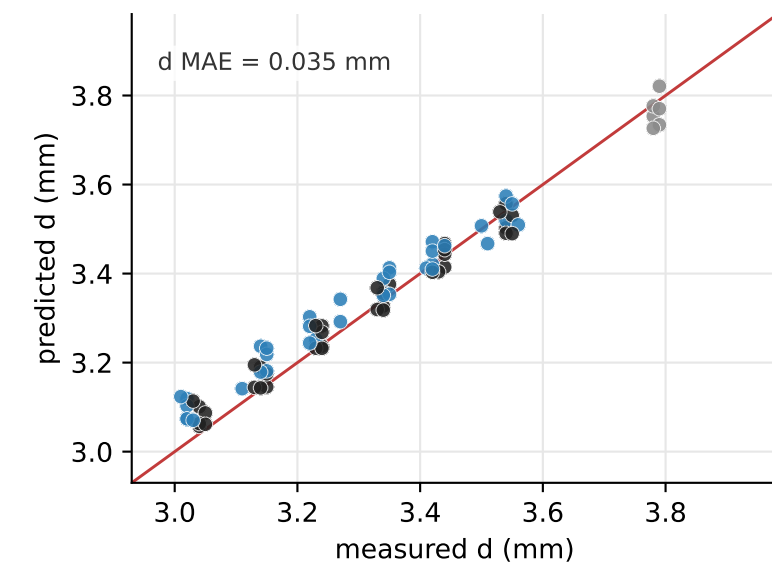

**d Local-ID model
B + path history + local jF/jd**

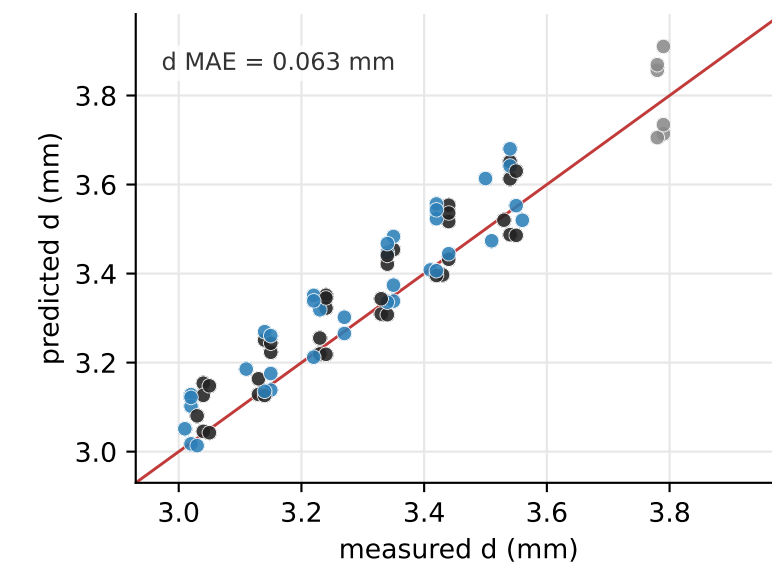

**e Plain magnetic baseline
B only**

**f Path-label baseline
B + branch label**

**g Path-memory model
B + path history**

**h Local-ID model
B + path history + local jF/jd**
